the common core state standards
gives us a unique opportunity to engage all learners
by using an integrated set of learning progressions
that proceeds toward college and career readiness
it also affords teachers the opportunity to design
and provide the right amount
and the right kind of instruction that will grant access to learning for all students
utilizing the progression of skills and knowledge
to meet standards across grades and content
also stimulates thinking about what needs to happen in instruction
in previous grades
to allow students to achieve standards for the current grade level and how
instruction and learning in the current grade
will influence what happens in the grades that follow as students encounter more complex iterations in this way the focus can always be on the students we teach and using more effective practices to provide them multiple means of access and engagement in learning currently and in the future the purpose of the videos is to provide a tool for teachers to explore have professional conversations and design effective instruction as they implement the common core state standards it is intended to be a tool because the instruction teachers provide must be responsive to the needs of the students
